

Machine manufacturing of parts
and high precision tools

Eye made in Hard Metal

History

We entered the industry in 1978 with small-scale machining under drawing. Forty years later, we are now a leader in precision machining, using the most advanced technology and highly qualified staff.

We work closely with different business organisations, technology centres, training centres and universities and we foster a culture of social and economic commitment to our immediate environment.

Pins for the Aeronautical Industry

Quality

In line with the high-precision products we produce, quality is a key strategic focus. We are certified under ISO 9001 and UNE-EN-9100 (aeronautics).

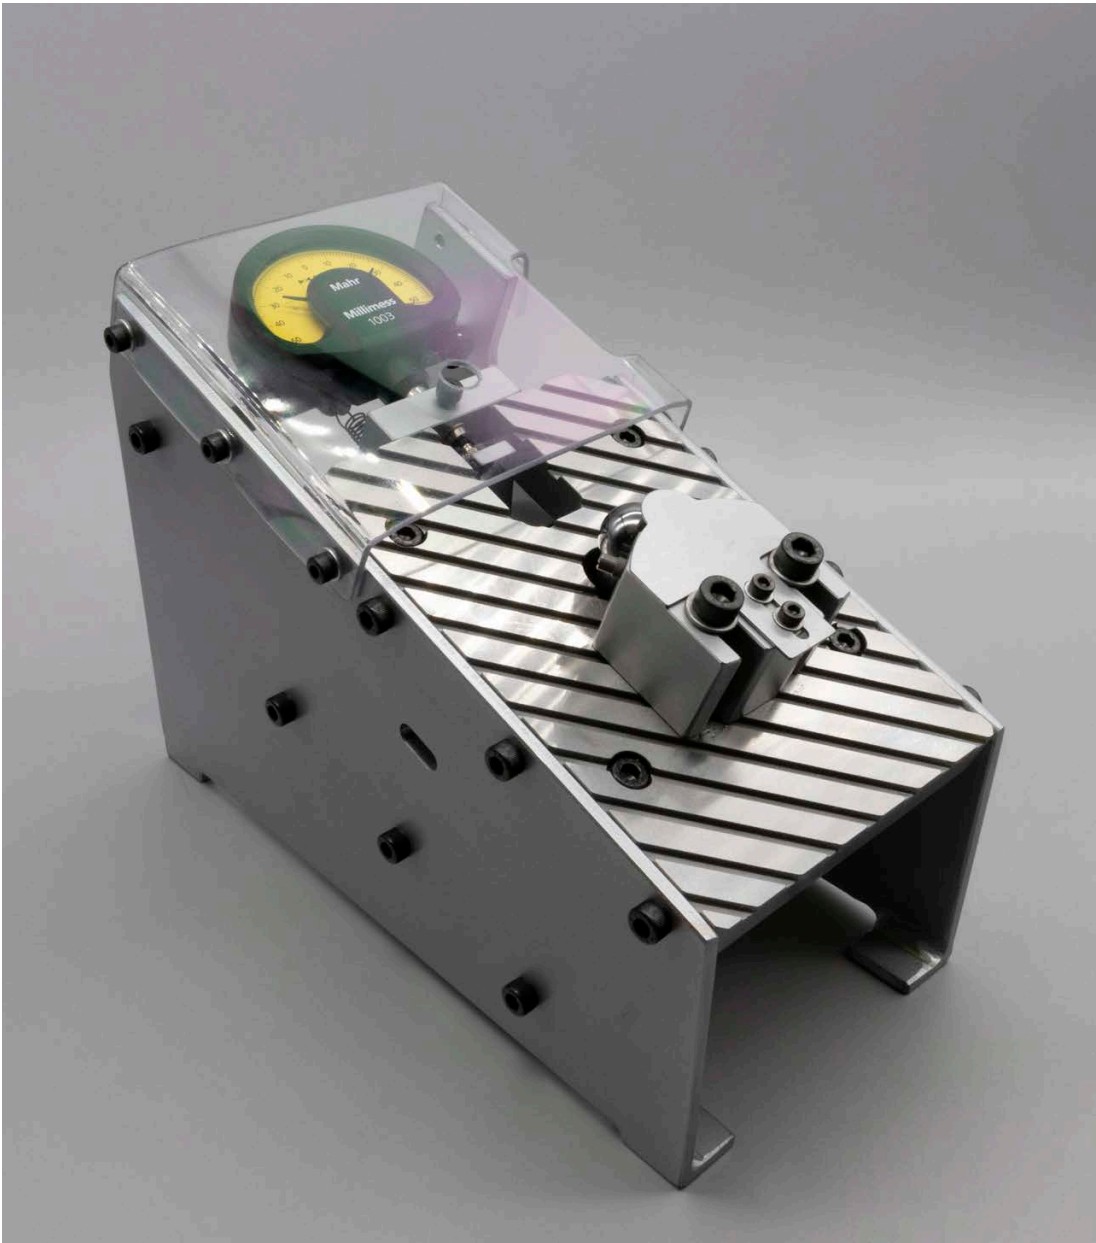

Production planning and traceability are essential tools in our business, so we use ERP software that integrates all departments and processes in the business. We always collaborate with customers, suppliers and partners, which guarantees the quality of our final product.

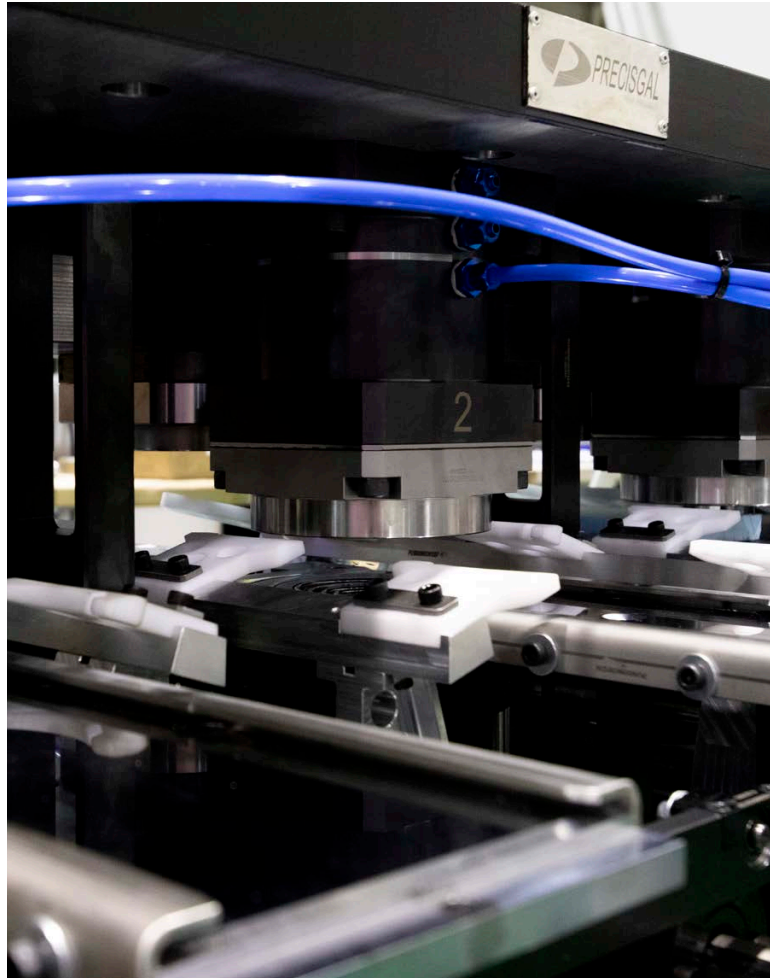

Our staff are the driving force of our business and their expertise, know-how, experience and commitment are outstanding.

Industries

Precisgal High Precision's production covers a wide range, in terms of both industry and country. We supply products worldwide to industries, of which the most notable examples are perhaps metal packaging, the automotive industry and the aeronautical industry.

Evenness and depth machine for spherical track

Die 83.7 DRD

Products

An important part of our production is focused on machining under drawing, measuring tools and the carrying out comprehensive die projects in steel, carbide and special alloys.
